1. Assignment Title

Technik Nest Company Profile UI with Like and Follow Functionality

2. Objective

The objective of this assignment was to recreate the provided UI design in React Native using Expo while maintaining the original layout, colors, typography, spacing, and styling. Interactive functionality was implemented for the Like and Follow buttons using React Hooks (useState).

3. Requirements

The application was developed according to the following requirements:

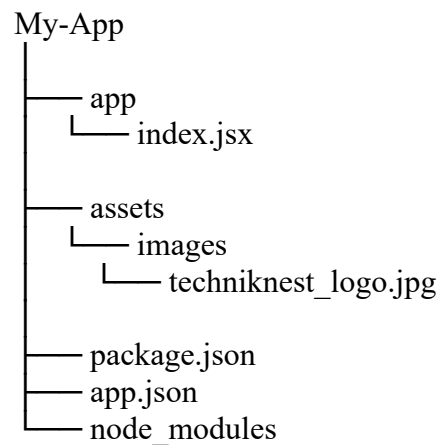

- Create the UI exactly as shown in the reference image.
- Display the Technik Nest logo inside the profile picture.
- Add a Like button.
- Increase the Like count by **1** whenever the Like button is pressed.
- Add a Follow button.
- Change the button text from **Follow** to **Following** after clicking.
- Maintain the same layout, colors, typography, spacing, and visual appearance as the reference design.

4. Tools & Technologies Used

- React Native
- Expo

- Expo Router
- JavaScript (JSX)
- React Hooks (useState)
- Expo Vector Icons

5. Project Folder Structure

6. Application Features

- Company profile user interface.
- Circular profile image displaying the Technik Nest logo.
- Modern dark-themed card layout.
- Interactive Like button with live counter.
- Interactive Follow button with text toggle.
- Responsive layout with proper alignment and spacing.
- UI closely matches the provided reference design.

7. Working Explanation

7.1. Profile Section

The profile section displays:

- Company Logo
- Company Name
- Company Description

The company logo is imported from the assets folder using:

```
require("../assets/images/techniknest_logo.jpg")
```

7.2. Like Button

The Like button uses React's useState hook.

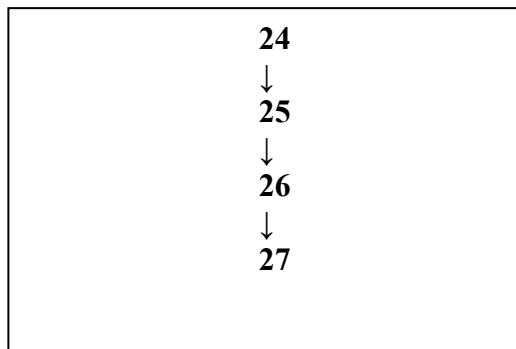

Initial State:

```
const [likes, setLikes] = useState(24);
```

Whenever the button is clicked:

```
setLikes(likes + 1);
```

Example:

7.3. Follow Button

The Follow button also uses the useState hook.

Initial State:

```
const [following, setFollowing] = useState(false);
```

On button click:

```
setFollowing(!following);
```

Display:

Follow

↓

Following

8. How to Run the Project (Steps)

8.1. Open Terminal

Navigate to the project folder.

- *cd My-App*

8.2. Install Dependencies (if required)

- *Install*

8.3. Start the Expo Development Server

- *npx expo start*

or

- *npx expo start --tunnel*

8.4. Run the Application on Web

Press:

- *w*

or directly run:

- *npx expo start --web*

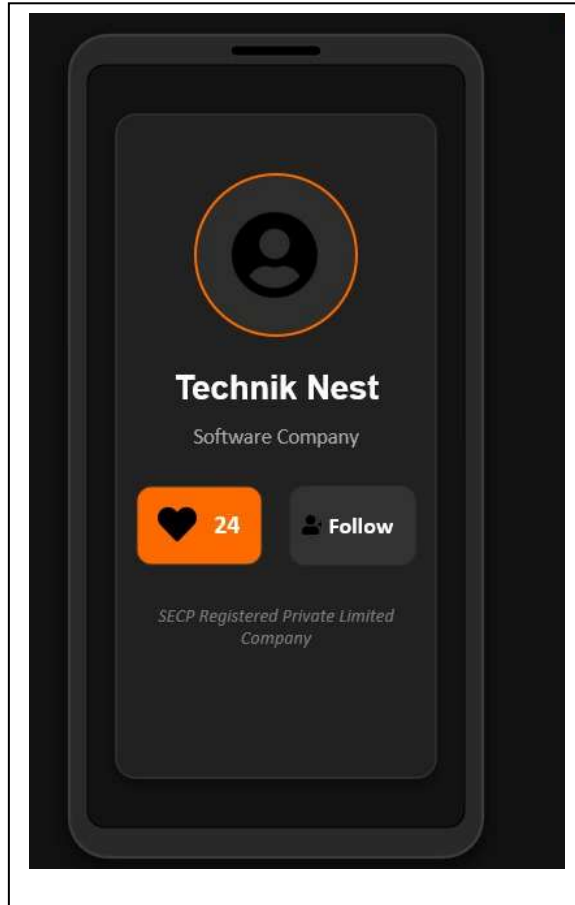

The application will open automatically in your default browser.

9. Useful Terminal Commands

Command	Description
<i>cd MyFirstApp</i>	Open project directory
<i>npm install</i>	Install project dependencies
<i>npx expo start</i>	Start Expo development server
<i>npx expo start --web</i>	Run project in web browser
<i>npx expo start --tunnel</i>	Start Expo using Tunnel mode
<i>r</i>	Reload application
<i>w</i>	Open project in browser
<i>a</i>	Open Android Emulator
<i>i</i>	Open iOS Simulator (macOS only)
<i>Ctrl + C</i>	Stop Expo server

12. Conclusion

This assignment successfully recreated the provided company profile interface using React Native and Expo. The layout, colors, typography, spacing, and overall design closely match the reference image. React Hooks (useState) were used to implement the interactive Like counter and Follow button functionality. This assignment strengthened practical knowledge of React Native components, state management, styling with StyleSheet, image handling, and user interaction through touch events. The project demonstrates a clean, responsive, and functional mobile UI built according to the given requirements.
